(54) Title: INTEGRATED CIRCUIT WITH AT LEAST ONE BUMP

(57) Abstract: In an integrated circuit (1) having a substrate (3) and having a signal-processing circuit (4) which is produced at a surface (8) of the substrate (3), there is provided on the substrate surface (8) a protective layer (12) that has at least one aperture (13) through which a second contact pad (14) is electrically and mechanically connected to a first contact pad (9), wherein the second contact pad (14) is of a height of at least 15  $\mu\text{m}$  and projects laterally beyond the aperture (13) on all sides and is seated on the protective layer (12) by an overlap zone (z) that is closed on itself like a ring, wherein the overlap zone (z) has a constant width of overlap (w) of between 2  $\mu\text{m}$  and 15  $\mu\text{m}$ , and wherein at least one element of the signal-processing circuit (4), and preferably only one capacitor (5) of the signal-processing circuit (4), is provided opposite the first contact pad (9).
